Clinical trial with Donat Mg natural mineral water (DRO/010312)

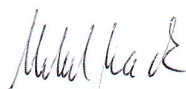

The results of a recent 6-week placebo-controlled clinical study performed at the clinical investigation site analyze & realize GmbH in Berlin, Germany, provided clinical evidence for the beneficial effect of Donat Mg natural mineral water on digestion in subjects with functional constipation.

It was shown that consumption of Donat Mg at a daily dose of 500 ml improved the bowel function: both an increase in stool frequency and in stool consistency was observed. The general well-being of the subjects improved significantly as well.

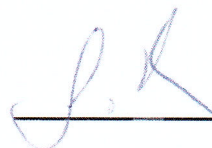

Furthermore, a good tolerability profile of Donat Mg was demonstrated.
